

## **GIS/GPS Precision Agriculture Manager**

### **Fantastic Opportunity due to Promotion!**

Do you have an agriculture related degree? Do you love computers and technology? Do you love the outdoors? My client has a tremendous career opportunity with their already successful and rapidly growing company where you can combine all of the above education, experience, and interests. You will be involved in fieldwork utilizing GIS / GPS and other technology in areas including soil mapping, soil sampling, moisture sensing, weather data, auto-steer equipment and research trials. You will supervise four (4) technicians. Promotional opportunities abound.

The company will provide a car, as you will be traveling throughout a tri-county area which includes Kern, Santa Barbara, and Northern Los Angeles counties. You will be provided with hand held computer and PC and cell phone along with generous benefits and a salary commensurate with experience.

To be considered, you must have a Bachelors degree in an agriculture-related field, technical and mechanical aptitude and 2-6 years experience. Staffing, budgeting, and managerial experience desired. Some background in research would be ideal. Bilingual English/Spanish would be a plus.

If this sounds like exactly what you have been looking for, don't let this opportunity pass you by. However, only those candidates who meet the requirements described will be contacted or considered.
